Vinyl Flooring — Waterproof, Durable & Designed for Modern Indian Spaces

Good flooring should do more than just look great—it needs to stand up to the demands of everyday life.

HKS Flooring India delivers a premium range of vinyl flooring solutions engineered specifically for modern Indian homes, offices, healthcare facilities, hospitality venues, and retail environments. Backed by a rich legacy originating from a German family business founded in 1835, HKS combines centuries of European craft expertise with a deep understanding of Indian climate and design needs.

The result? The timeless, natural beauty of real hardwood without the heavy maintenance, warping, or termite risks. For those exploring **SPC flooring in India**, HKS provides advanced rigid-core constructions (SPC) that pair superior dimensional stability with 100% waterproof performance.

What Is Vinyl Flooring?

Vinyl flooring is an engineered, multi-layer synthetic floor covering made primarily from PVC. It is designed to precisely mimic the natural textures and aesthetics of hardwood, stone, and marble. In **SPC (Stone Plastic Composite) flooring**, a heavy-duty mineral core is integrated into the center to deliver exceptional strength, impact resistance, and structural stability.

An HKS vinyl plank is engineered using a precise multi-layer system:

Layer	Functional Purpose
Top Wear Layer	Shields the decorative surface from scuffs, scratches, UV rays, and everyday stains.
Decorative Layer	Provides ultra-realistic high-definition visual prints, wood grains, and organic textures.
Rigid SPC Core	Forms the dense, dimensionally stable foundation that resists heat, moisture, and impact.
Backing Layer	Enhances underfoot comfort, absorbs sound, and assists with seamless installation.

The HKS Engineering Edge

HKS takes rigid-core performance further with a **5.2 mm overall construction**, featuring a **1 mm integrated Blax IXPE underlayment** for superior acoustics and underfoot cushion, paired with **Unilin fold-down click technology** for rapid, glue-free floating installation.

Why Choose HKS Vinyl Flooring in India?

Our legacy is more than just a brand story. *Heinr. Krüger + Sohn* was established in Münster, Germany, in 1835 and is currently managed by its sixth generation. We have been FSC-certified since 2008, bringing a long-standing commitment to sustainability and quality to every plank.

We engineer our vinyl systems to handle the specific climate variations, heavy foot traffic, and humidity shifts common across India.

HKS Advantage	Project Value
190+ Years of German Lineage	Benefit from nearly two centuries of flooring innovation, reliability, and manufacturing standard precision.

Heavy-Duty SPC Construction	Delivers zero-swelling, termite-proof stability across demanding commercial and residential interiors.
0.3 mm to 0.5 mm Wear Layers	Customizable protection levels tailored to light residential or heavy commercial traffic requirements.
5.2 mm Total Profile	Optimal floor height that provides rigid strength without requiring major door trimming during renovations.
Integrated 1 mm Blax IXPE Backing	Eliminates the need for separate underlayment while enhancing sound dampening and thermal comfort.
Unilin® Fold-Down Click System	Fast, hassle-free floating installation with tight, gap-free joints.
ISO 9001 & ISO 14001 Certified	Internationally verified standards for manufacturing quality and environmental sustainability.
Class 23/31 & 33/42 Ratings	Rated specifically for heavy residential, general commercial, and intensive commercial applications.

HKS Vinyl Collections & Specifications

Rather than offering generic vinyl, HKS focuses exclusively on high-performance Rigid/SPC click vinyl powered by Unilin locking systems. By offering tailored wear layer options and usage classes, HKS allows architects, designers, and homeowners to select the precise specification needed for their specific space and traffic levels.
